

Alliant Power Welcomes Capital Reman Exchange, Expanding Capabilities and Commitment to Customer Success

Together, we're raising the standard for quality, speed, and reliability in heavy-duty engine solutions across North America.

Madison, WI | Denver, CO | January 20, 2026 — *Alliant Power*, a leading provider of premium engine repair components and complete engine solutions, proudly announces the acquisition of *Capital Reman Exchange*, an industry leader in remanufacturing Class 8 truck diesel engines and components, headquartered in Denver, Colorado.

This acquisition underscores our shared commitment to helping customers achieve quality, cost-effective repairs—**done right the first time**—with speed and OE-level components. We are excited to welcome the talented Capital Reman team to the Alliant Power family. Their deep technical expertise and proven track record in engine remanufacturing strengthen our ability to deliver exceptional solutions to service shops, fleets, and dealers across North America.

“Capital Reman has built an incredible reputation for quality and reliability, and an amazing team with deep capabilities in remanufacturing,” said Houman Kashanipour (“HK”), CEO of Alliant Power. “I want to thank Brian Pfister, Brian Byrne, and Dennis Gordon for partnering with us and for the outstanding capability they’ve developed with their team over the years. Together, we will continue to raise the standard for engine solutions, helping our customers keep their fleets running efficiently and cost-effectively.”

This partnership marks a significant milestone in our mission to provide a “Total Package” solution for the heavy-duty aftermarket. By integrating Capital Reman’s state-of-the-art remanufacturing facility and expertise with Alliant Power’s industry-leading OE-critical engine components, we will deliver complete engine solutions that give customers peace of mind and confidence in every repair.

For more than a decade, sourcing high-quality, remanufactured heavy-duty engines has been a challenge for service shops and dealerships. Capital Reman has spent 11 years elevating that standard; and now, alongside Alliant Power, that mission will accelerate.

Together, we will offer premium overhaul kits, long blocks built to OE specifications, and expanded fuel and air system solutions; ensuring customers have everything they need for reliable engine performance. Our goal is simple: give customers the parts and support to “get the job done right the first time.”

“At Alliant Power, our customers’ goals are our goals,” said Jeff DeCarlis, Vice President of Sales and Marketing at Alliant Power. “This partnership strengthens our ability to deliver

value, speed, and reliability. We're excited about the opportunities ahead—for our customers and for our growing Alliant Power workforce.”

With aging fleets and rising repair costs, remanufactured engines represent a strategic advantage, enabling fleets to extend vehicle lifecycles and reduce total cost of ownership. This acquisition positions Alliant Power to deliver even greater value to the markets we serve.
